

VIKING PURE™
SOLUTIONS

1: We Prioritize Resident Safety

- Our community has invested in a technology — coupled with staff certification — to **upgrade our Infection Prevention Protocols** through the **removal of toxic chemicals from our environment**.
- Toxic Chemicals are harsh and dangerous to residents, staff and our community.
- The Viking Pure solutions are safe to use even when residents are present — they are also food surface safe with no rinse required, and can be used throughout our community without risk.
- The Disinfectant generated from this technology is **EPA-Registered as Hospital Grade**, yet is **non-toxic**. It is one of very few disinfectants that is **officially GreenSeal certified**.

2: We are Antimicrobial Certified

- All community team members have **completed a certification course in modern day infection prevention techniques** specifically in the assisted living/memory care settings. This certification was granted to us via the Viking Pure Solutions Medical Advisory Board. This certification assures you and your loved ones that our team is diligently following all updated procedures for proper infection prevention, thus creating an environment that's ultimately safe for you, our visitors and community team members.

****WE ARE THE ONLY COMMUNITY LOCALLY TO HAVE OBTAINED THIS VERY IMPORTANT CREDENTIAL!!**

3. We are Prepared

- We generate all our needed cleaning and hospital grade disinfecting solutions **on site within our community and in unlimited amounts**. Our cleaning and disinfecting protocols are not impacted by supply chain disruptions or delays.
- In case of a resident or team member sickness, we have **unlimited product available** to protect your loved one from potential communal illness.
- **Viking Pure Disinfectant kills COVID, FLU and NOROVIRUS.**

4. We Care About the Environment & Our Team

- We want to **eliminate unnecessary waste and provide a more sustainable living environment** for you and your loved ones.
- We care about our fellow team members and do not want them exposed to the dangers of toxic chemicals.

Studies have shown that long term exposure to harsh or toxic cleaning chemicals can lead to lung damage and cancer

5: Try the Disinfectant Yourself!

Ask for a sample — Use it as a non-toxic, alcohol-free disinfectant for any surface of your choosing. Many apply it to their cell phones, desk areas or other high-touch objects. You do not want to know how dirty your cell phone may be!
