

On-Site Generation: The Key for Sustainable Cleaning in Facilities

On-site generation of cleaning and disinfecting solutions presents an opportunity for facility managers to take full control of their cleaning supply chain, eliminating disruptions while implementing more sustainable practices.

Viking Pure Solutions was founded with a mission to remove toxic cleaning chemicals from our environments. Our patented electrolyzed water generator system enables facilities in nearly any industry to **produce organic, highly effective cleaning and disinfecting solutions on-site and on-demand.**

-  Reduces vehicle emissions from product transportation
-  Standardizes easy re-use of plastic spray bottles
-  Solutions are VOC-free, hypoallergenic, and don't contain any fragrances or toxic chemicals
-  Any excess or discarded solution is organic and environmentally safe
-  Both solutions are GreenSeal certified to meet the highest standards for protecting health and the environment

The Viking Pure Cleaner and Disinfectant solutions can replace at least 90% of the products that facility staff use to clean and disinfect. Since they are generated on-site at your location for a fixed monthly rate to rent the generator machine, you can produce as much solution as needed to optimize the cost of cleaning and disinfecting your facility. *Most Viking Pure customers experience cost savings from replacing their cleaning supply with our system.*

Generate Powerful & All-Natural Cleaning & Disinfecting Solutions On-Site

Take control of your facility's cleaning supply chain with innovative technology from Viking Pure Solutions!
