

Essential Questions to Ask at Your Loved One's Senior Care Facility

Here are some essential questions to ask care facility management to help ensure that your loved one is in a safe environment free from harmful chemicals:

1. What types of cleaning products are used, and are they free from harmful chemicals such as ammonia, bleach, or other volatile organic compounds (VOCs)?
2. Are the cleaning products certified by recognized organizations, like Green Seal or EPA Safer Choice?
3. How frequently are cleaning products applied in resident rooms, common areas, and on high-touch surfaces?
4. What measures are taken to ensure proper ventilation during and after cleaning?
5. Do they use any air fresheners, scented cleaners, or other products that may contain allergens or respiratory irritants?
6. What measures are in place to protect residents with asthma, COPD, allergies, or other conditions that could be aggravated by chemical exposure?
7. Is there a clear process for residents or families to raise concerns about the cleaning products used and request safer alternatives?
8. How willing is the facility to explore and adopt safer alternatives if concerns are raised?

By asking these questions, you'll be equipped to make informed decisions and advocate for a safer environment for your loved one.
